

The Mobile Connectivity ROI Index

Transport and Logistics

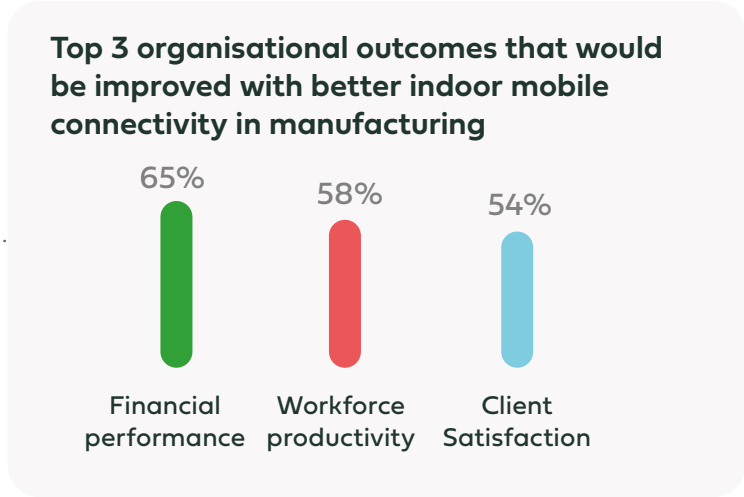

We surveyed 100 senior executives from medium and large organisations across transport and logistics to understand their perspective on what dedicated mobile connectivity adds to the sector.

They reported better indoor mobile coverage would bring

+£2.4BN

in productivity gains to the transport and logistics sectors.

77% of business leaders said real time tracking and monitoring of goods, assets and employees: the no.1 digital transformation activity driving demand for better mobile signal.

“When connectivity drops it forces employee to re-log-in to devices, they lose time waiting for them to reboot.”

– CEO in Logistics, South East
